Key insight

ADBE Option Market Implies Uncertainty After Earnings

Market read

The ADBE option market reflects a mixed outlook following recent earnings. While implied volatility is elevated, suggesting uncertainty, the term structure shows a slight backwardation, indicating some expectation for price stability in the near term. The skew is balanced, with no significant directional bias. However, put options are more actively traded than calls, hinting at potential downside risk perception.

Strategy context

Put options are more actively traded than calls, suggesting potential downside risk perception.

JW AI conclusions

Short- and medium-term model interpretation

AI context bias	**Bearish**
AI analysis updated	**Sep 15, 2026 2:04 PM EDT**

Short-term scenario

Cautious dip-buy for potential 1-3 week bounce given recent oversold options positioning and software rotation, but mixed technicals and post-earnings volatility create high uncertainty; wait for confirmation above $266.

Three-month outlook

Highly uncertain. Fundamentals (double-digit ARR growth, expanding AI-first revenue, buybacks) support a recovery toward $280-310 if monetization of 1B users and enterprise demand materialize, but persistent AI-disruption narrative, slightly soft Q4 guide, CEO transition, and software-sector rotation could keep the stock range-bound or pressured toward $240. Identify elevated uncertainty from the large gap between cheap valuation and lingering growth/AI skepticism.

Market sentiment

Mixed with value-oriented bullish tilt among longer-term investors (undervalued cash-flow machine, AI as enhancer rather than disruptor, cheap P/E, buybacks). Contrarian optimism vs. short-term bearish options flow (put/call ratio in 96th percentile). Skepticism persists on AI competition, Q4 guide, and leadership change.

Supporting evidence

Implied volatility is elevated at 41.66%, suggesting uncertainty surrounding future price movements. | The term structure shows a slight backwardation, with near-term IV slightly higher than farther-term IV, potentially indicating some expectation for stability in the near term. | The delta 25 skew is balanced at 0.02 points, showing no strong directional bias in option pricing.

Risk watch

Elevated implied volatility suggests increased price swings are possible. | The put/call ratio is skewed towards puts, indicating a higher probability of price decline.

Important disclosures

Scope, limitations, risk and permitted interpretation

General market information only

This report is general quantitative research and market commentary. It is not investment, legal, tax or accounting advice; it is not an offer, solicitation, order, recommendation or promise of performance. It does not consider any reader's holdings, objectives, financial circumstances, risk tolerance or suitability.

Model observations - not instructions

JW Rank, strategy fit, model reference, upside scenario and risk reference levels are model observations. They are not entries, price targets, stops, position sizes or instructions to buy, sell, open, close or hold a security or option. A higher score does not imply lower risk or a guaranteed favorable outcome.

Data, AI and model limitations

Prices, volumes, fundamentals, options data, news-derived context and model outputs reflect the timestamps shown and may be delayed, incomplete, revised or inaccurate. AI-generated explanations can omit context or produce errors. Models can fail when volatility, liquidity, correlations or market regimes change.

Performance and scenario limitations

Past, hypothetical, back-tested, simulated and model-derived results are not indicative of future results. Strategy statistics may exclude commissions, fees, taxes, slippage, early assignment, execution constraints and other costs unless expressly stated. Actual outcomes may differ materially.

Options risk

Options are complex and are not suitable for all investors. They may involve total or substantial loss, assignment, early exercise, margin calls, liquidity and spread risk, volatility and Greek exposure, event risk, regime shifts and expiration risk. Multi-leg positions may not execute or close at modeled prices.

Investor responsibility and ODD

Use current market information, assess suitability independently and consult qualified professionals when appropriate. Before trading listed options, read Characteristics and Risks of Standardized Options (ODD) available from the Options Clearing Corporation at theocc.com.
