Key insight

SPCX Option Market Implies Continued Growth Despite Recent Pullback

Market read

The SPCX option market appears bullish despite a recent pullback in price. While the stock dipped 1.6% on September 18th due to a delay in the Starship Flight 14 launch, implied volatility remains elevated, suggesting anticipation of significant movement following the event. The term structure is flat with slightly higher IV for near-term expirations, indicating traders are pricing in potential volatility around the upcoming launch date. The skew shows call demand exceeding put demand, further supporting a bullish outlook.

Strategy context

Traders are positioning for potential upside following the Starship Flight 14 launch.

JW AI conclusions

Short- and medium-term model interpretation

AI context bias	**Mixed**
AI analysis updated	**Sep 18, 2026 1:50 PM EDT**

Short-term scenario

Cautious buy-the-dip / hold long bias into Starship Flight 14 catalyst (high event risk; 1-3wk window). Technicals support bounce but delay news caused pullback. High uncertainty from launch outcome (success could +5-10%, failure sharp drop), valuation, and vol.

Three-month outlook

Moderately bullish if Starship orbital success, continued Starlink/AI (xAI/Grok/compute) execution, and NASA/gov contracts materialize—potential toward $180-220 (analyst mean $222) as growth story (91%+ rev) outweighs losses. However, very high uncertainty: unproven Starship cadence/profitability path, ~70x P/S multiple vulnerable to rates/macro/AI sentiment shifts, possible lockup overhangs, execution/capex intensity, and post-IPO volatility (already -6% 52w, -16% 3m from $185). Range could be $130-190. Not advice; new public name with limited track record.

Market sentiment

Cautiously bullish/mixed. Positive on long-term AI compute (orbital/Starship ambitions, Grok/xAI, GW-scale buildout), Starlink growth, NASA/defense contracts, analyst upgrades, and dip-buying. Watchers noting daily close, 0DTE options, partnerships (e.g. Atlassian/Cursor). Concerns: launch delay, high valuation vs fundamentals, fading lockup fears, potential pull to $134-136 VWAP/SMA50. Overall growth-story optimism but short-term event/vol risk acknowledged; not uniformly euphoric.

Supporting evidence

Implied volatility remains elevated despite the recent price dip. | The term structure is flat with slightly higher IV for near-term expirations. | Call demand exceeds put demand, indicating a bullish skew.

Risk watch

The upcoming Starship Flight 14 launch carries significant event risk. A successful launch could propel the stock higher, while a failure could trigger a sharp decline.

Important disclosures

Scope, limitations, risk and permitted interpretation

General market information only

This report is general quantitative research and market commentary. It is not investment, legal, tax or accounting advice; it is not an offer, solicitation, order, recommendation or promise of performance. It does not consider any reader's holdings, objectives, financial circumstances, risk tolerance or suitability.

Model observations - not instructions

JW Rank, strategy fit, model reference, upside scenario and risk reference levels are model observations. They are not entries, price targets, stops, position sizes or instructions to buy, sell, open, close or hold a security or option. A higher score does not imply lower risk or a guaranteed favorable outcome.

Data, AI and model limitations

Prices, volumes, fundamentals, options data, news-derived context and model outputs reflect the timestamps shown and may be delayed, incomplete, revised or inaccurate. AI-generated explanations can omit context or produce errors. Models can fail when volatility, liquidity, correlations or market regimes change.

Performance and scenario limitations

Past, hypothetical, back-tested, simulated and model-derived results are not indicative of future results. Strategy statistics may exclude commissions, fees, taxes, slippage, early assignment, execution constraints and other costs unless expressly stated. Actual outcomes may differ materially.

Options risk

Options are complex and are not suitable for all investors. They may involve total or substantial loss, assignment, early exercise, margin calls, liquidity and spread risk, volatility and Greek exposure, event risk, regime shifts and expiration risk. Multi-leg positions may not execute or close at modeled prices.

Investor responsibility and ODD

Use current market information, assess suitability independently and consult qualified professionals when appropriate. Before trading listed options, read Characteristics and Risks of Standardized Options (ODD) available from the Options Clearing Corporation at theocc.com.
